

17.5 % of clean ZCHSound control calibration beats are unmatched by B6 (> the 10 % target), so the matched threshold lies on the tie at 1.0. Option A (main analysis since the follow-up): every tied beat is rejected when > 5 % of calibration beats tie, so B6 calibration rejection on ZCHSound is 17.5 % instead of 10 %. * $p < 0.05$.
