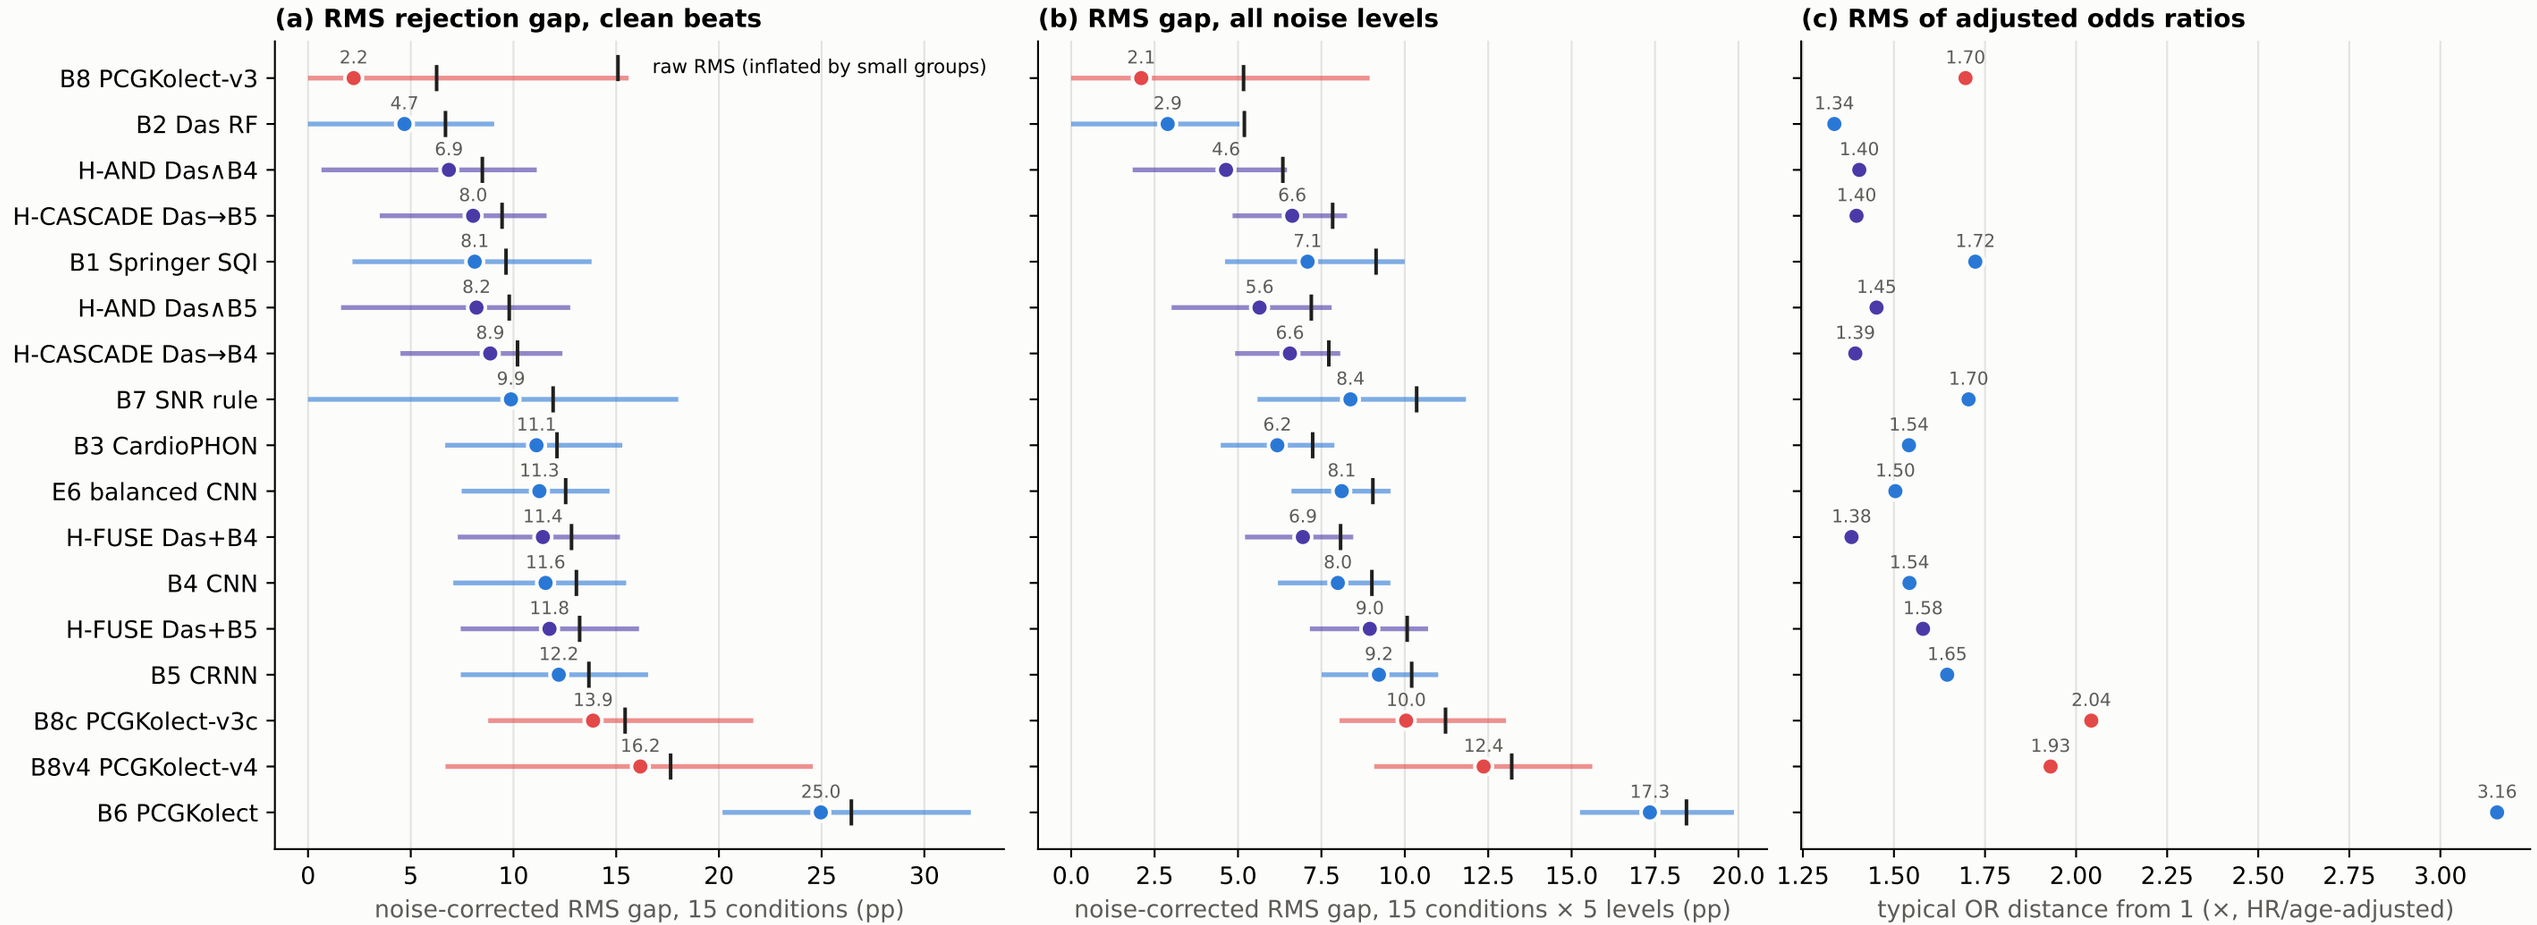
Aggregate bias: RMS of the pathological-minus-normal rejection gap over all 15 disease / rhythm conditions (lower = less biased)



Dots: noise-corrected RMS (sampling variance of small groups removed) with 95 % patient-bootstrap CI; bars "|": raw RMS. Blue = existing filters, red = PCGKolect-v3 variants, purple = hybrids. Matched thresholds; E2 equal-noise protocol; mean of 3 seeds for seeded models. Explora
